

A photograph of several Marines in camouflage uniforms and helmets, equipped with rifles, positioned in a forest. In the background, a dark-colored amphibious vehicle is partially visible among the trees. The scene is set in a wooded area with tall, thin trees and green foliage.

# Balancing Mission with Environment

**Camp Lejeune's Environmental Management System (EMS) supports the training mission by reducing environmental impacts**

**AIR EMISSIONS • HAZARDOUS MATERIALS • HAZARDOUS WASTE • SPILLS • SOLID WASTE**

The EMS establishes programs, procedures, and responsibilities to meet performance goals of the installation Environmental Policy Statement, which include:

- Continued compliance with regulatory requirements
- Preventing pollution through recycling and waste minimization
- Conserving natural and cultural resources while ensuring continued mission capability
- Continually improving environmental performance

Under the EMS, all Camp Lejeune Marines and civilian personnel must understand the environmental effects of their jobs and operate in an environmentally sound manner.
