

Environmental Standard Operating Procedures (ESOP)

TITLE: ESOP 9.12 | FIRE TRAINING PIT EXERCISES

PURPOSE: This SOP establishes the procedures and guidelines for disposing Petroleum/Oil/Lubricant (POL) contaminated material following the completion of a fire training exercise. It outlines the necessary steps required after the material is captured in the containment basin at this facility.

APPLICABILITY: This SOP applies to all MCI-EAST Marine Corps Base (MCB), Camp Lejeune commands, tenant commands, contractors working aboard Camp Lejeune, Reserve Units and any other command that uses the fire pit facility for training purposes.

RESPONSIBILITY: All personnel who engage in fire training exercises aboard MCB, Camp Lejeune.

PROCEDURE:

1. Prior to Training Exercise.

a. Fire & Emergency Services Division will provide the Pollution Abatement Section (PAS), EMD (451-1482) with a schedule of training exercises (i.e. weekly, monthly, quarterly, annually, however generated).

b. Prior to training, PAS will ensure that the containment basin, located at the Fire Training facility on Piney Green Road, has been properly skimmed of any oily material. PAS will activate the basin pump switch to remove the remaining water.

c. Once drained, the pump switch will be locked in the OFF position. Only PAS personnel are authorized to operate the pump at this facility.

2. Fire Pit Training Exercise.

a. During the course of the exercise, product (POL & water mix) will drain into adjacent containment basin. Once the training exercise is completed OR prior to the basin reaching full capacity, fire training personnel will contact PAS to service the training basin.

b. PAS will determine the amount of material to skim from the basin & then activate the pump switch. **NO OTHER ACCESS TO THE PUMP SWITCH IS AUTHORIZED.**
